

Technological progress for the period
April 2, 2020 to April 9, 2020

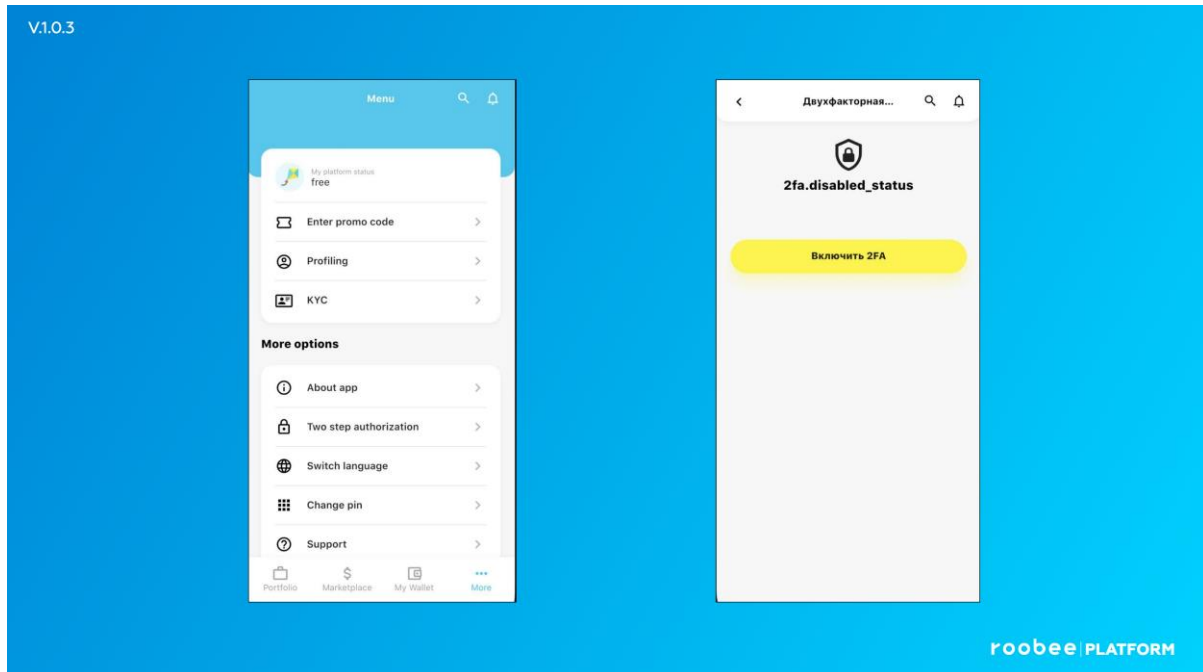

This week we will tell you what has been added to the mobile version of the Roobee platform, what was amended, and on what elements of the platform the work has been started.

Technical summary from the development team

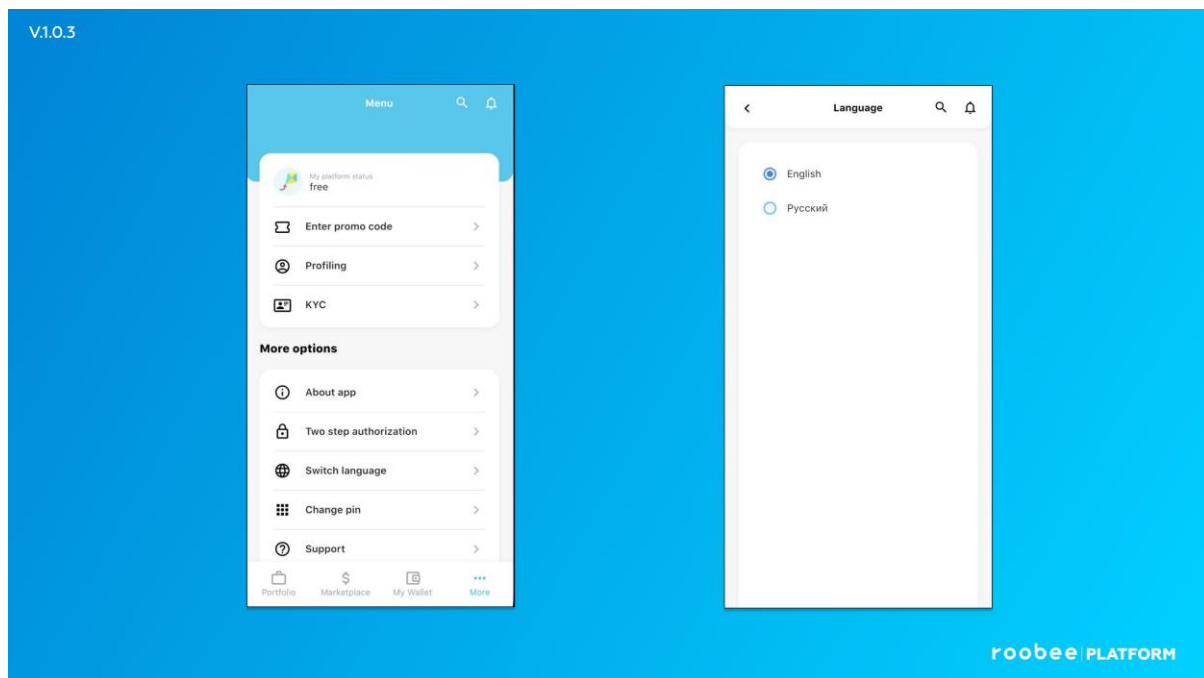

Here is a small part of the development work done lately:

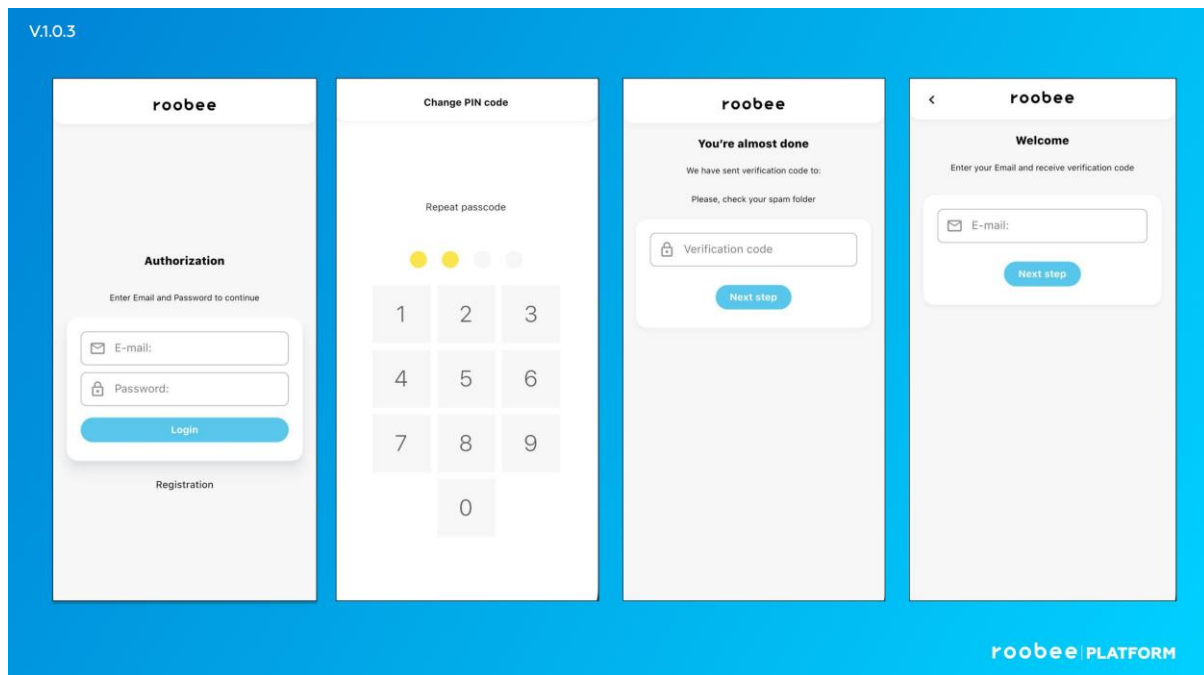

- Added Two-factor Authentication support.

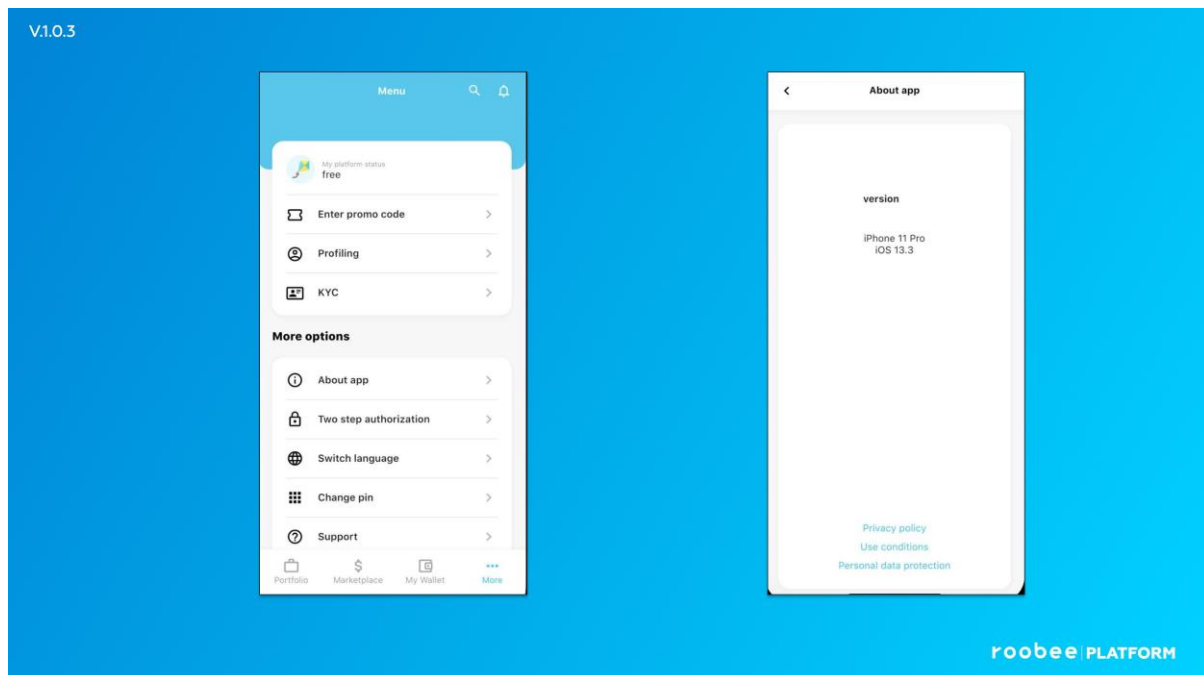

- Multi-language support was added.

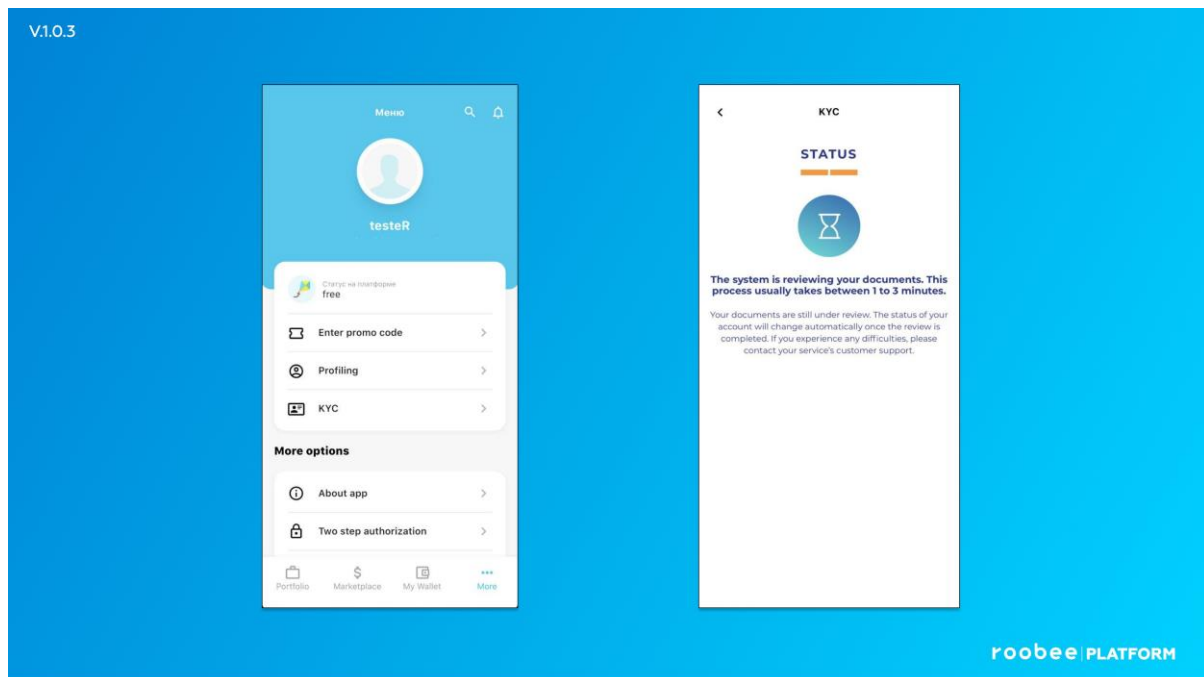

- The “Sign In” and “Sign Up” screens were redesigned.

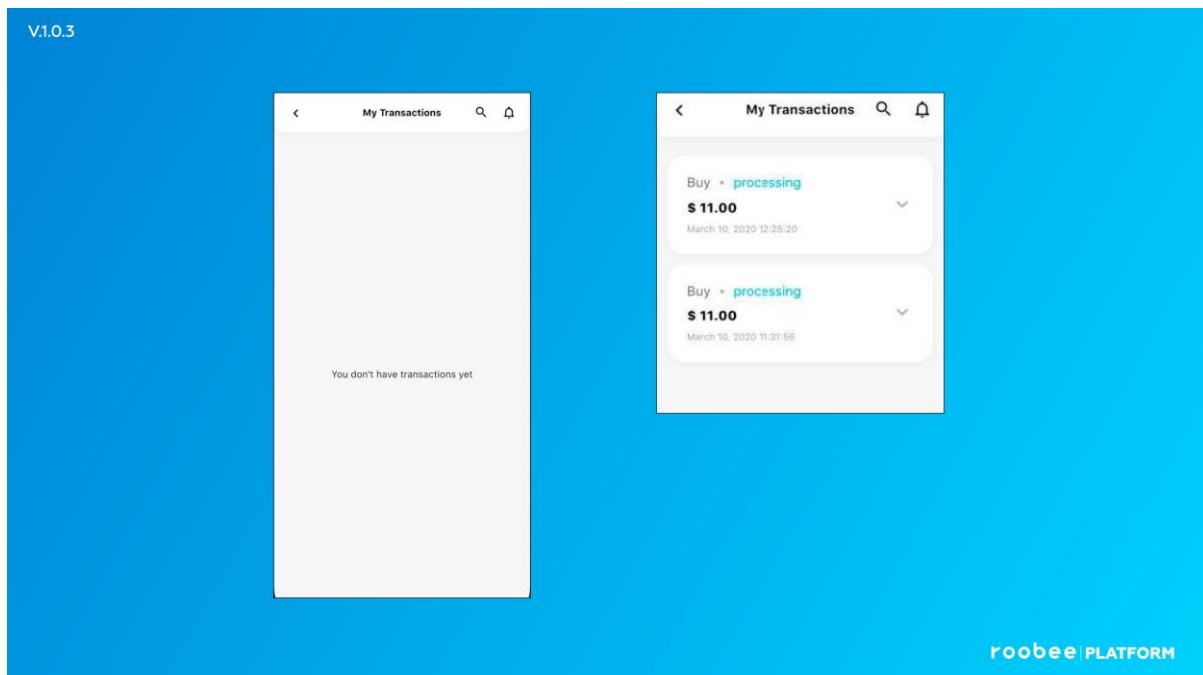

- Added a new “About App” section.

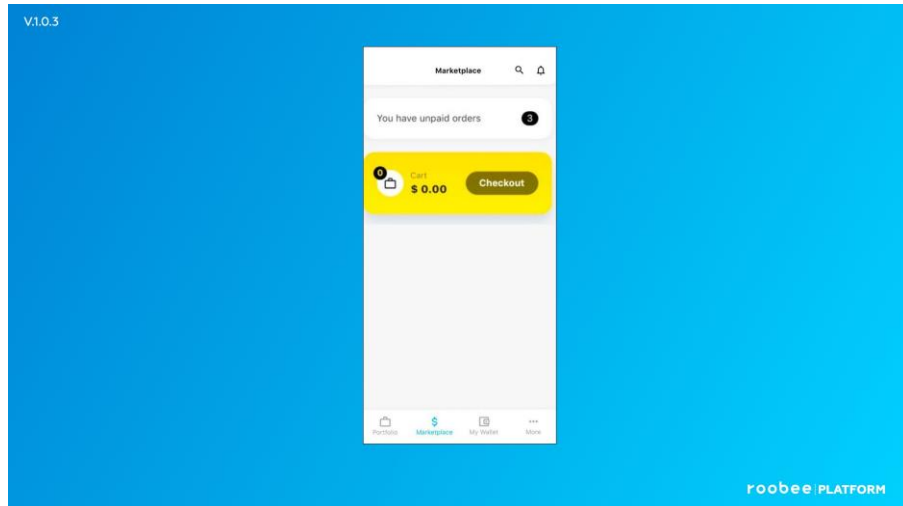

- Added the KYC functionality.

- There is now a separate screen for unpaid orders.

- A new panel that allows accessing your orders was added to the Marketplace screen.

- You can now sign in with Face ID or Touch ID.
- Fixed a bug when logging out.
- The graph of historical returns that is shown in the asset card has been reworked.
- Fixed errors that occurred when signing up.
- A new screen/section that displays user's transactions was added.
- User profiling has been implemented.
- Added a button for logging out in case you forget your PIN code.
- Placeholders for images with invalid URLs have been added.
- Fixed an error when displaying "historicalReturn".
- Fixed an error when displaying the price of an asset.
- Added checking for internet connection.
- App stability improvements.
- A new "Support" section is being worked on.

You can keep track of the updates on Roobee social networks.
