

Technological progress for the period
December 14, 2019 to January 27, 2020

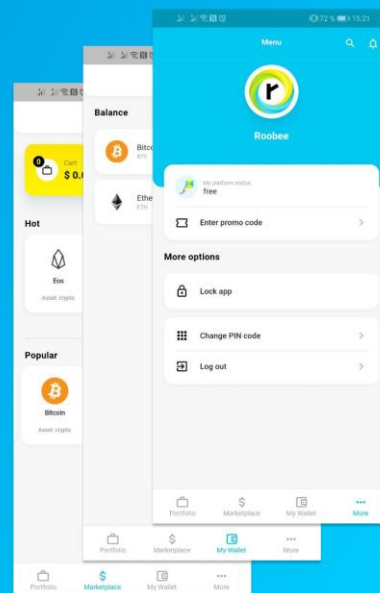

Over the past month, the Roobee development team has been focused on the development of the solution allowing to write and read the data on the beneficiaries to the Hyperledger blockchain.

We have elaborated on this in more detail in the [series of articles](#).

Apart from this certain progress has been made in the development of the Roobee platform. Our team of developers continue to supplement the main functions of the Roobee's web version and mobile app.

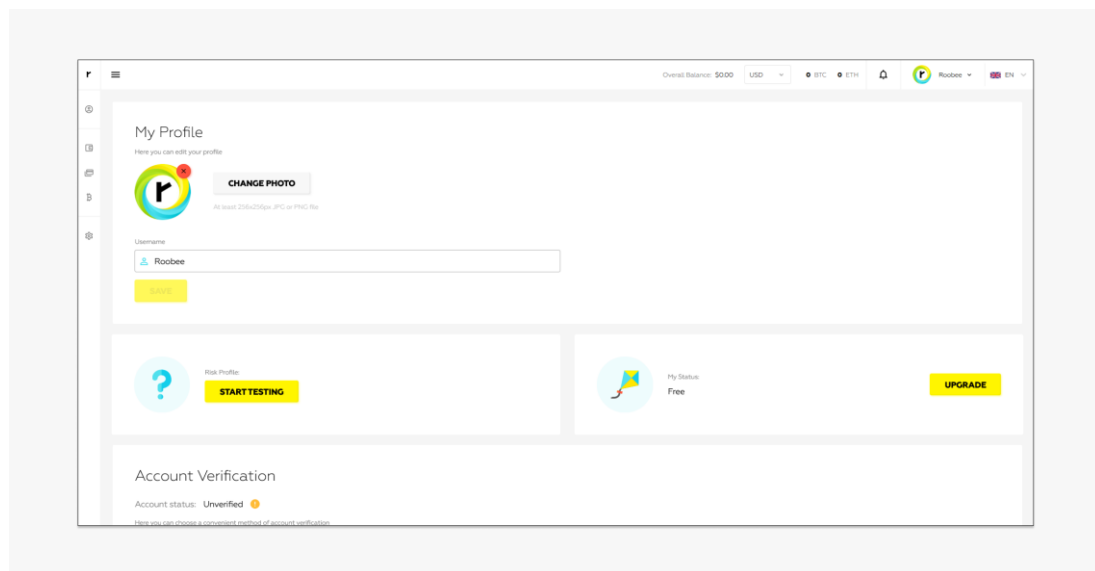

You can read all the details in our report.

Technical summary from the development team
